

StreamPlayer is a super simple application that allows you to stream audio and save it into.asf file. You can even select what audio device to use. This project was created as a test application for the ST64218 device. Change History: Version 3.6 - Removed unused driver - Cleaned up Interface Version 3.5 - Made the Settings page easier to use - Moved all the files out of the main project so that you can just drag and drop them wherever you need. Version 3.4 - New Addon: Change Log - New Addon: Audio Console (Console window for displaying the audio buffer, volume, and pulse) Version 3.3 - Added a few more features - Added a link to a GitHub project where you can find many more features Version 3.2 - Cleaned up Audio File Formats - Added a sample application to the Audio Console Addon - Changed the add-on to work with the QM302 (Simba) driver Version 3.1 - Audio Volume control - Resized the application (to fit on my screen) Version 3.0 - Changed the sample application to work with the ST64218 (Stamp and Meter) - Added a link to a GitHub project where you can find many more features Version 2.2 - Ported to Visual Studio 2012 - Improved the Code Style - Made the Settings page easier to use Version 2.1 - Improved the project for Microsoft Visual Studio 2008 - Changed the Unit Test project to work with Visual Studio 2008 Version 2.0 - Initial Release Fox, And Beethoven... And More Today on Club Class, we're not just talking about the charming world of foxes. We're talking about Russian innovators, sonic instruments, and a man who is both genius and friend to beethoven. That's right, this weekend on Club Class we will be exploring the life of Mstislav Rostropovich. One of the most influential musicians and critics of the 20th century, and one of the most influential of the Russian composers, Rostropovich, as you might know, is the rare man who has mastered both the piano and the cello. His mastery of these two instruments has made him one of the most well-reg

What's New in the Audio Stream?

Streams audio from multiple sources and saves the streamed audio into a.asf file. Audio is streamed from multiple sources which can be any audio device that has built in audio driver (e.g. Realtek High Definition Audio driver, Mic amplifier). Usage: 1. Audio Stream will allow you to stream any audio file in to multiple audio sources. To begin, go to the "Audio Stream" tool and click on the "Start Streaming" button. The "Add Audio" button enables you to add multiple audio sources to the Audio Stream. Click on the "Add" button to add new audio source. You can also use the "Edit Multiple Audio" button to quickly stream audio from multiple sources. Once you click on the "Stop Streaming" button, your audio will be streamed to the last recorded audio source. To change the audio source, simply click on the "Edit Multiple Audio" button. The saved audio file is saved to the folder which is currently selected in the "Save As" dialog box. If you click on the "Update" button, your saved.asf file will be updated and the audio stream will start over. To stop the audio stream, simply click on the "Stop Streaming" button. Click on the "Download" button to download the recorded.asf file onto your local computer. Once you click on the "Download" button, you will be prompted to choose a location to save the.asf file. 2. Get the.asf file To convert an.asf file into the.wav file type, simply double click on the.asf file. Once the.asf file is opened, the.wav file is converted into the.wav file type. If you have an.mp3 file, simply double click on the.asf file and it will open in Audacity. To change the.mp3 file into a.wav file type, simply select the "Settings" button and change the "Sample Rate" to 16000 and the "Bit Rate" to 16000. If you have a.mp4 file, simply double click on the.asf file and it will open in QuickTime. To change the.mp4 file into a.wav file type, simply select the "Settings" button and change the "Bit Rate" to 16000. 3. Audio Stream's toolbox Audio Stream's toolbox has the ability to edit and save the audio file to a different format than its original file. a. Editing the audio file To edit the audio file, simply double click on the.asf file. The editing process is quick and easy and Audio Stream automatically saves the edited audio file. To change the audio
