* For Windows, check out the _Photoshop for Dummies_ book from Wiley Publishing, Inc. (`www.wiley.com`). * For Mac, check out the _Photoshop Elements 9 Complete Guide to Photographic Retouching_ book from Wiley Publishing, Inc. (`www.wiley.com`). ## Mastering Basic Editing Techniques Whenever you edit an image, the three most important steps are * **Organizing the image:** Organizing the layers is often done to create a simplified image so that you can more easily control the specific areas of the image. Organizing layers is covered in detail in Chapter 16. * **Choosing the tools that are best suited for your needs:** Photoshop has a tool called the History Panel that displays a series of steps that can be used to show you the steps that you have previously taken in an image. You can also create tool presets so that you can recall the various tools and their usage when you need them. When working on the History Panel and creating presets, keep in mind that you can stop editing at any point and come back later. Chapter 19 covers using the History Panel and the tools available to it. * **Using the specific controls on the toolbars:** Just as you learned in the previous chapter, knowing where to place your hands while using the tools will enable you to make correct selections and smooth out images. In the following sections, you find tutorials that can help you improve your skill at some of the basic image-editing techniques.

Q: How to add subtitles in a video in Node.js? I would like to add subtitles to a video uploaded by a user in Node.js. Is there any module to do this? I tried this: var fs = require("fs"), Stream = require("stream"); var videoStream = fs.createReadStream("subtitles.srt"); var videoWriter = fs.createWriteStream(videoPath); videoStream.pipe(videoWriter); I'm trying to add the subtitles of a language in the script. But it doesn't work. A: I believe that the npm module you mentioned already exists, just add 'ngsubtitles' to your package.json dependencies and you are good to go. Link to the module: Hope that helps, Best regards Posting to the Tesla Forums is now limited to verified Owners. I upgraded to the latest firmware just before installing the new wifi antenna (thanks to all who suggested this). The antenna is now in place, and I'm just waiting for the new firmware to download on to my work computer. The installation was pretty straightforward. I'm running v1.2 of the firmware. After the install I connected my 3G ATT USB modem, which I had to temporarily remove from the computer's USB port during the installation, I can't plug back in as long as the unit is on. It is already connected to a power source when the unit turns on, and I've verified a couple times that it is indeed connected via USB. I'm currently in Milwaukee. I can try to access the system via the gsm/phone network (I have a Droid), but I can't get into Tesla's "my orders" site that I was using to send the order to my shop. I was able to sign in. But it is giving me a web address at "zw.tesla.com" and that's it. I have tried this a couple times over the past few days, but not this morning. The issue isn't my phone, I just wasn't able to get an IP via
